Summary

Full-stack software engineer with **2+ years** of experience building production web applications and backend services for e-commerce marketplaces. Strong expertise in React, TypeScript, Node.js and Python, with hands-on experience across the full stack, from front-end interfaces to APIs, databases and cloud deployment. Skilled in designing reliable systems such as long-running workflows, third-party API integrations and event-driven pipelines, backed by automated testing and observability. Completed an MSc in Computing Science with **Distinction** at the University of Glasgow, specialising in AI and machine learning.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS, Bash, Java
Front end: React, Next.js, Vue 3, Redux, Tailwind CSS, Vite, Webpack
Back end: Node.js, Express, REST APIs, OpenAPI, OAuth 2.0, microservices, event-driven architecture, WebSockets
Workflows and messaging: Temporal, Kafka, BullMQ, Redis
Data: PostgreSQL, MySQL, MongoDB, Sequelize, Mongoose
Cloud and DevOps: Google Cloud, AWS (S3, EC2), Docker, Kubernetes, Helm, Terraform, Azure DevOps, GitLab CI, Jenkins, Git
Testing and observability: Jest, Mocha, Specmatic (contract testing), OpenTelemetry, Grafana
AI developer tools: Claude Code, Cursor, OpenAI Codex
AI/ML: PyTorch, TensorFlow, scikit-learn, NumPy, pandas, ONNX Runtime, TensorRT, Triton Inference Server

Experience

Software Development Engineer Oct 2023 – Aug 2025
Fynd (B2B retail and e-commerce), marketplace integrations team *Mumbai, India*

- Led the implementation of the company's first **Temporal** workflow engine through a **9-12 month** migration that rebuilt **9 marketplace integrations** and **about 80 workflow stages** on one model, replacing years of per-integration special cases.
- Developed **Node.js** integrations with Amazon, Flipkart and Shopify REST APIs, syncing inventory and orders for catalogues of up to **300,000 SKUs** into **PostgreSQL**, handling per-seller credentials, rate limits, retries and third-party schema changes.
- Delivered the company's first **Amazon VDF** integration in **3 months**, from design document to production.
- Engineered a **BullMQ** and **KafkaJS** pipeline that processed **70,000+** orders and feed updates a day at peak, staying within Amazon's feed rate limits without delaying new orders.
- Introduced the team's first automated tests: **Jest**, Mocha and Specmatic contract-test suites for **9 integrations** that previously had **0%** coverage, enforced by a **70% coverage gate** in Azure DevOps CI.
- Set up **Google SSO** and added per-seller **IAM** authentication for Amazon's APIs across **100+** sellers.
- Shared on-call for production inventory systems for **2 years**, resolved **30+ incidents** directly with clients and wrote the root cause analyses.
- Developed a no-code workflow builder in **React**, **TypeScript** and React Flow, iterating with the **5+** product managers who used the tool daily until new integrations needed **50%** less engineering help.

Projects

Workflow Automation Platform (personal project) | *TypeScript, React, React Flow, Node.js, Temporal* 2026 – Present

- Designed and built a no-code automation platform where users chain API calls on a drag-and-drop React Flow canvas using **4** node types: triggers, conditions, loops and actions.
- Implemented the execution layer on Temporal with retries and step-by-step tracing: **100/100** runs of a **20**-step workflow passed against a mock API failing **30%** of calls, resuming after a full server shutdown.

FormHook: Fault-Tolerant Webhook Delivery | *Node.js, TypeScript, BullMQ, Redis, AWS EC2, Terraform* 2025

- Built a distributed webhook delivery service on BullMQ and Redis with up to **3** delivery attempts, exponential backoff and dead-letter queues, preventing event loss when an endpoint fails.
- Added an on-demand failure-simulation mode that injects errors and timeouts to test recovery, and provisioned the service on AWS EC2 with Terraform for one-command setup and teardown.

Education

University of Glasgow Glasgow, UK
MSc Computing Science, ***Distinction*** *(completed)* *Sep 2025 – Sep 2026*

- AI/ML focus. Coursework: Machine Learning, Deep Learning, Natural Language Processing, Information Retrieval, Algorithms.

University of Mumbai Mumbai, India
Bachelor of Engineering in Information Technology, ***GPA 8.42/10*** *Feb 2021 – May 2023*
