PROFILE SUMMARY

Full Stack Engineer and Software Development Engineer with strong programming skills and a solid foundation in distributed system design, systems integration, and production observability. Delivered scalable event-driven architectures using Temporal, Kafka, and BullMQ, building and maintaining internal software tools and web services across the full stack. MSc Computing Science candidate at the University of Glasgow (graduating September 2026), with a focus on machine learning and AI systems. Available for full-time roles from September 2026.

WORK EXPERIENCE

- Software Development Engineer**, Fynd – Mumbai, India Jan 2024 – Aug 2025
- Led systems integration of 9 marketplace platforms onto a unified, **Temporal**-orchestrated no-code workflow engine, applying event-driven design patterns to reduce development cycles and improve maintainability.
 - Designed and implemented a resilient web services integration for Amazon VDF using **BullMQ** and **KafkaJS** to process high-volume feed APIs at scale; wrote technical documents covering architecture and integration specs.
 - Built complete test infrastructure (**Jest**, **Specmatic**) covering unit, integration, and performance testing; integrated **OpenTelemetry** for distributed tracing across software systems.
 - Maintained **Kubernetes** and **Docker** infrastructure; improved CI/CD pipelines through shell script automation; exercised project management skills coordinating delivery across multiple internal software systems.
- Software Development Engineer Intern**, Fynd – Mumbai, India Oct 2023 – Jan 2024
- Managed inventory systems and resolved bugs across 9 marketplace integrations, applying data structures and algorithms to improve system reliability.
 - Developed foundational skills in software system architecture, testing practices, and observability tooling; communicated findings and progress to senior engineers regularly.

RECENT PROJECTS

- Speech-Based Depression Detection** – MSc Dissertation, University of Glasgow 2026
- Developed a deep learning pipeline (**PyTorch**, **OpenSMILE**) for depression recognition from paralinguistic speech features, implementing stacked RNNs and instance-based aggregation (SIL/MIL) with statistically validated evaluation.
- Speech Emotion Recognition** 2026
- Developed a CNN-based classifier achieving 73.57% validation accuracy in detecting emotional states from audio signals, utilizing custom feature extraction pipelines and evaluation workflows.
- FormHook Delivery System** 2025
- Built a fault-tolerant web services delivery system featuring distributed job queues, exponential backoff retries, and real-time failure simulation using **BullMQ**, demonstrating applied design patterns for resilient backend systems.

EDUCATION

- University of Glasgow** – Glasgow, UK Sep 2025 – Present
- MSc in Computing Science
- University of Mumbai** – Mumbai, India Feb 2021 – May 2023
- Bachelor of Engineering in Information Technology (GPA: 8.42 / 10.0)

SKILLS

Languages: Python, JavaScript, C++, Java, PHP

Machine Learning & AI: PyTorch, TensorFlow, CNN Architectures

Distributed Systems & Backend: Node.js, Kafka, Temporal, Redis, BullMQ, PostgreSQL, MongoDB, SQL

Cloud & DevOps: Kubernetes, Docker, Google Cloud (GCP), Git

Frontend: React, Next.js, Tailwind, Sass, HTML5, CSS, JavaScript

Observability: OpenTelemetry, Grafana, Coralogix
