Profile

Full stack engineer with two years of commercial TypeScript and Node.js experience at a fast-moving e-commerce technology company. Works across the stack, from React and Next.js interfaces through REST and GraphQL APIs to PostgreSQL, Kafka and containerised deployment, with strong automated testing and CI/CD habits and a track record of owning features from technical design to production. MSc Computing Science, University of Glasgow, completing September 2026. Available immediately.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Java
Frontend: React, Next.js, Tailwind CSS, HTML5, CSS
Backend & Data: Node.js, REST APIs, GraphQL, Kafka, Temporal, BullMQ, PostgreSQL, MongoDB, Redis
Testing & CI/CD: Jest, Specmatic, contract testing, GitLab CI, Jenkins, Azure DevOps
Infrastructure: Docker, Kubernetes, Google Cloud, Vercel, OpenTelemetry, Grafana, Git

Experience

Software Development Engineer, Fynd, Mumbai (e-commerce technology) Jan 2024 – Aug 2025

- Led the migration of nine external marketplace integrations onto the company's first **Temporal-orchestrated workflow engine**, rebuilding **roughly 80 workflow stages** across the order lifecycle and inventory synchronisation, and consolidating years of accumulated special-case logic into one model.
- Built the client-side interfaces for these integrations in **Next.js, React and TypeScript**, the configuration and monitoring surfaces sitting over the workflows running behind them.
- Ran inventory and order synchronisation against marketplace catalogues of up to 300,000 SKUs, integrating third-party REST and GraphQL APIs including Shopify's GraphQL Admin API and handling evolving schemas, partner rate limits and retry semantics.
- Built the company's first integration against **Amazon's VDF feed APIs** on BullMQ and KafkaJS, designing an ingestion layer that hides asynchronous feed completion and partner rate limits from callers so new orders keep being accepted while earlier submissions are still in flight.
- Introduced the team's **first automated test suite**, taking nine integrations from no coverage to Jest and Specmatic suites across unit, integration and performance layers, enforced in CI as a **70% coverage gate** on every merge.
- Instrumented services with OpenTelemetry tracing surfaced in Grafana, and maintained **Kubernetes and Docker infrastructure** across production and two development environments on Google Cloud.

Software Development Engineer, Intern, Fynd, Mumbai Oct 2023 – Jan 2024

- Debugged and improved inventory systems spanning nine marketplace integrations in a live commerce environment.

Projects

FormHook, Fault-Tolerant Webhook Delivery (Node.js, TypeScript, BullMQ, Redis) 2025

- Built a distributed webhook delivery service with job queues, **exponential-backoff retries**, dead-letter handling and a live failure-simulation mode for testing resilience.

Personal Portfolio and Demo Platform (Next.js, React, TypeScript, Vercel) 2025 – Present

- Shipped a responsive site hosting live, interactive demos of my own projects, including a browser-testable real-time audio classifier.

Temporal vs Static Models for Depression Detection in Speech (MSc Dissertation, PyTorch) 2026

- Compared stacked RNNs against Logistic Regression and Support Vector Machine baselines for depression detection from speech on the Androids Corpus; paired t-tests across a person-independent 5-fold protocol showed the temporal model held no statistically significant advantage at any segment length.

Education

MSc Computing Science, University of Glasgow Sep 2025 – Sep 2026
BE Information Technology (GPA 8.42 / 10.0), University of Mumbai Feb 2021 – May 2023
